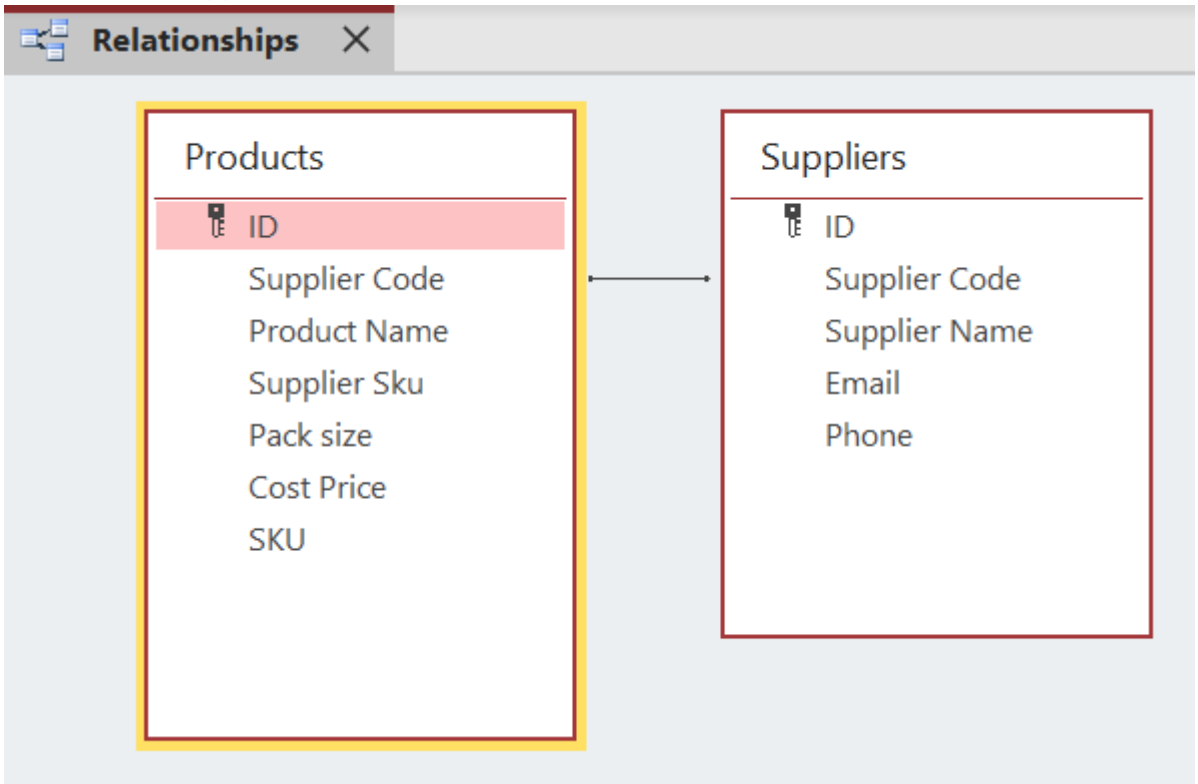
Purchase order, ASN and Suppliers update

Suppliers

Currently there is a data table With Supplier Code, Supplier Name, Email & Phone columns.

Create a new data table With Supplier Code, Product Name, Supplier SKU, Pack Size, Cost Price & SKU columns The Supplier Code value can be the link between them:



Create a new menu under the Suppliers → Supplier's Products

At the top add two buttons to Export /upload csv file. To make it easy to edit this list.
List all the content of this file. Group this list by supplier.
This database is needed for:

- Products cost price: calculate the Product SKUs cost price from this table – Product_Cost_Price= Products!Cost_Price / Products!Pack_Size
- At Purchase Orders all of these columns are needed to create the Purchase Order and the ASN (Advanced Shipping Notice)

Purchase Order

At the Create PO

At first ask the:

- Client
- Supplier

- Warehouse (where the products will go)
- PO Reference (Can be auto generated: Supplier_Code+last used number+1) ie: FF 36 or NBF 277
- Comments

After this data has been added on the next screen or under this input comes the:
Add Items:

Load all of the product details (all columns except the Supplier Code) to the screen from this Supplier in a list from the Products! Table what I mentioned in the Suppliers section. And add two Quantity columns: 1st is the Supplier Product qty and the 2nd is the Product SKU quantity calculated from the 1st: Product_SKU_qty = Supplier_Product_qty * Pack_Size
Let only the Supplier Product qty column to be edited.
Add 3 buttons:

- a **Confirm Purchase order** to the bottom or top of the page. – that removes all the lines where the qty is 0.
- a **Generate Purchase Order pdf** button where it can be exported to pdf. That template must contain:
    - PO Reference
    - delivery details (shipping address)
    - Client details (billing address)
    - order date
    - Suppliers details
    - Requested minimum BB date - default settings: =Today()+182

    - Supplier's SKU
    - Product Name
    - Product_SKU_qty
    - Unit Price = Product_Cost_Price
    - Line Price
    - VAT

    - Total Cases (total of Product_SKU_qty-s)

    - Total Net Amount
    - VAT Amount
    - Total Amount

Something like this, but here the SKU is wrong, because the Product SKU is here not the Supplier's SKU:

PURCHASE ORDER

PO Ref:
Order Date: 20/03/2026

Supplier Details:
9 Brand Foods Limited

Units1, 2 & 3
Rake Farm
Chester

CH49JN
UNITED KINGDOM

Delivery Details:
Warehouse
36 Gorsey Place

Skelmersdale
Lancashire
WN8 9UP
UNITED KINGDOM

Customer Details:
Free From Direct

36 Gorsey Place

Skelmersdale

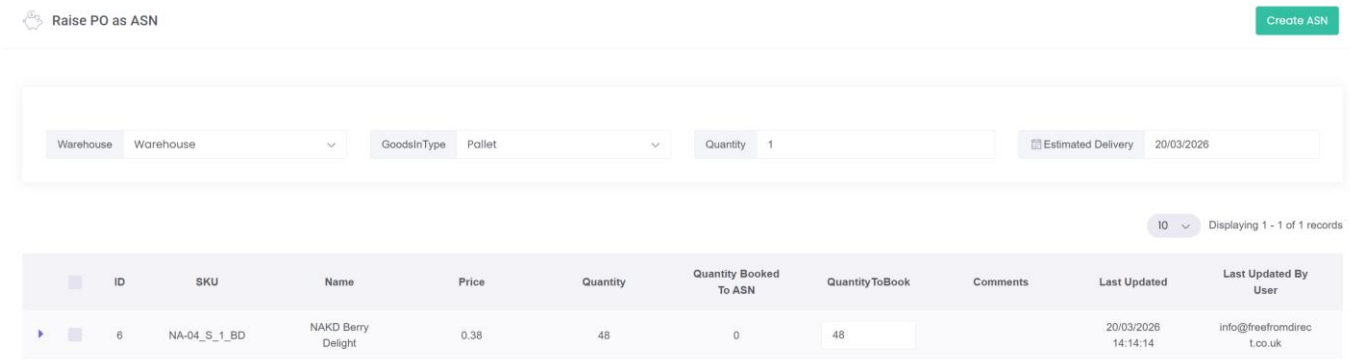
GB240576024

SKU	Name	Quantity	Unit Price	Line Price
NA-04_S_1_BD	NAKD Berry Delight	48	0.38000	18.24

Currency	GBP
Shipping Total	0.00
Total Cost	18.24

Comments:	

- And a **Generate ASN** button:
  When I click on, it should look like this:



Have the option to change the warehouse, Goods In Type and qty (like 5 pallets or 4 carton box) and Estimated delivery.
Also to confirm the quantities from the supplier. This table should look like the previous table and all of that data including a new column Quantity to book is the only editable.
When we click on the **Create ASN** button it will create an ASN what will be now visible in the **Goods Receiving** menu. Also in the Mobile app too.

Goods Receiving

In the **Goods Receiving** menu should look like this:

ID	Client	Status	Warehouse	Supplier	POReference	Estimated Delivery	Comments	GoodsIn Type	Quantity	Last Updated	Last Updated By User	Actions
1409	FFD	AWAITINGDELIVERY	Warehouse	Kiddylicious	KID 48	18/03/2026 00:00:00		Pallet	1	18/03/2026 08:30:30	kristof@freefromdirect.co.uk	Actions
1410	FFD	AWAITINGDELIVERY	Warehouse	Olly's Olives Ltd.	OL 43	18/03/2026 00:00:00		Pallet	19	18/03/2026 11:05:56	kristof@freefromdirect.co.uk	Actions
1408	FFD	BOOKEDIN	Warehouse	Kestrel Foods Limited	FF 38	17/03/2026 00:00:00		Pallet	1	17/03/2026 08:39:43	info@freefromdirect.co.uk-API	Actions
1407	FFD	BOOKEDIN	Warehouse	R.H Amar & Co Ltd	EK 204	10/03/2026 00:00:00	Organic	Pallet	2	11/03/2026 08:48:53	info@freefromdirect.co.uk-API	Actions

Also it can be look in details:

When we click on edit the ASN,I want to add the expected best before date and Batch No in advance, because usually we receive the delivery note when the products are dispatched. This data input speeds the receiving process up. In the mobile app we don't need to add each BB data and batch individually, just confirm it. Next to the Expected qty should be the Case qty (Supplier_Product_QTY) as well to count easier the stock.
